

Fein Gator Blades (Windshield Removal Blades)

Subject: Fein Gator Blades

Serrated L & U shaped windshield removal blades

This month's tech-tip will be introducing some new Fein Auto Glass removal blades, which will increase productivity and reduce the every day fatigue of windshield removals. Which brings me to my tech-tip for this month.

I'm excited to announce that Fein is introducing (6) new auto glass removal blades. That will once again put the technician on the outside of the vehicle where they should be, to reduce the possibility of interior damage to the vehicle.

Three of the new Fein Blades are L shaped, like the legendary cold knife blades, except the new Fein Blades will be serrated. They will come in $\frac{3}{4}$ ", 1" and 1-1/2". The blade will be mounted on the tool vertically utilizing the auxiliary pull cable. Now the window cutter will be used as a powered cold knife.

The second recommendation is to place the blade on the tool at a 45-degree angle, making sure that the cutting edge of the blade is over the head of the tool. By pushing the tool away from you in a clockwise manner, will significantly reduce the effort of cutting through the urethane. This method will allow the technician to use their body weight as leverage during the cutting process increasing cutting control and reducing fatigue.

The three new U shaped blades will be mounted on the tool in the same configuration as in the past. Again utilizing the auxiliary pull cable handle it is used as a powered cold knife.

NOTE: Always sharpen blades before using, use clean water to cool and lubricate the cutting area. Recommended speed setting 4-1/2 – 5 to reduce smoke and increase cutting performance.

The Fein Serrated blades can be purchased from your local [PGW Auto Glass Distribution Center](#).
