

## Pinchweld Kit

### Subject: Pinchweld Kit - 6-39-03-368-99-9

Multi-step paint systems applied on today's late model vehicles require the technician to minimize paint damage during the autoglass removal process.

FEIN Power Tools Inc has created a special Pinchweld Kit that will increase technician's productivity while minimizing possible paint damage during the autoglass removal process.

Below is a brief description of its function to assist the autoglass technician in repairing any damaged areas they may encounter during the autoglass removal process, or to repair a pre-existing damage before installing a new autoglass part into a vehicle.

- (1) 6-39-03-128-01-2 Mushroom Blade:  
Removes the excess urethane from the windshield frit band without damaging the bonding surface.
- (1) 3-01-09-128-01-8 Adaptor:  
Will need to be applied to the window cutter to attach the 40-grit Carbide Finger Rasp.
- (1) 6-37-31-002-01-7 Carbide Finger Rasp:  
Is a 40-grit rasp that will remove rust/corrosion from the pinchweld bonding surface, without damaging the painted vertical leg of the pinchweld.
- (1) 6-39-03-146-01-8 3/4-inch Scraper Blade:  
Teflon coating to prevent scratching the pinchweld during the urethane removal process from the pinchweld. Its unique reverse tapered cutting edge allows approximately 2mm of urethane to remain on the bonding surface.

Recommendation: Speed setting for all blades shown above is #2

NOTE: Items in this kit can be purchased separately.

This Pinchweld Kit can be purchased from your local distributor
